My attempt: Since $f(0)=0$, then $f(x)$ must be some power of $x$. The problem is that I am not sure how to proceed from here. Any help would be appreciated. Thank you! A: It is clear that $f(x)$ must be of degree $0$. So if $f(x)$ is not a constant we must have $f(x) = x^k$ for some $k>0$. So let $k\ge1$. Then $0 = a_n f(1) = a_n \cdot 1^k$, so $a_n=0$ and therefore $f(x) = ax^k+b\in\Bbb Z[x]$. F-actin disorganization induced by the depletion of cofilin 1 has a role in a cell-autonomous pathway for apoptotic cell death induction in Xenopus laevis oocytes. A previous study showed that apoptotic cell death occurs in Xenopus laevis oocytes after treatment with cycloheximide and caffeine. We have observed that the caspase inhibitor Z-Val-Ala-Asp-fluorometh
