Category:Windows graphics software Category:Windows multimedia software Category:Windows-only software Category:Free and open-source Android software Category:Mobile software Category:MacOS multimedia softwareQ: How to use objects within a class in a simple way? I am taking a unit on Java and I am working in a assignment that I am stuck at. I am creating a class for a small memory management program. I have managed to create a LinkedList with methods to retrieve and retrieve the memory address of a value, and also print each value's memory address out. However, I have been

---

stuck on how to create a method where objects from another class can use within my class. For example, I have a class called Circle, and I have created a class called Shape. Shape has multiple variables and methods that make it look more complex than Circle, but what 3da54e8ca3
