For more information on Photoshop, I recommend taking a look at *_Adobe Photoshop CS for Digital Photographers_* by Bruce Fraser and Trevor Trappman, 5th edition (Sybex, 2008). The following sections highlight some of the most-used Photoshop tools. # Compositing The word *_compositing_* means simply "putting together."

A composite is an image that is created from multiple parts — usually a number of images that have been cut out from a single background. Photoshop is used to create image composites. The most common compositing techniques are *** Layer compositing:** This is a critical step in any Photoshop image compositing project. Most often, one image is "layered" over another image, adjusting the properties of the latter as needed. Different overlays can be adjusted based on the final look of the image. *** Merging:** This is where one image is placed completely on top of another. You can choose any image as the background or foreground, as I explain in the sidebar "Creating a seamless composite," later in this chapter. *** Blending:** This is where two or more images are blended together. A

composite can look almost the same as two single images, but a composite will likely show more depth or a unique feel to the image. The options in the following sections cover each of these compositing techniques.

Dalit scholar receives hate mail over Irom Sharmila's death anniversary New Delhi, Aug. 9 (ANI): A senior Dalit scholar, Ratnakar Chaudhary has received hate mail from a Hindutva hate group and a BJP leader on the death anniversary of Irom Sharmila Chaudhary. Chaudhary's letter has been handed over to police. The scholar, who is the president of the

Dalit-OBC Irom Sharmila Janti Samiti, was attacked by a mob in Rajasthan's Motiya village on August 7. The main accused in the incident is Ashok Kumar Sharma. He was earlier booked by the police in an attack on Chaudhary. He was later arrested by the police and expelled from BJP. (ANI)Q: "In order to" vs "to be able" Is "in order to" a suitable and common substitute for the verb "be" ? As mentioned in the introduction, the goal of this assignment is to create a program that, when given a list of 'labels', can return an output indicating which two labels are nearest to each other and which two are farthest apart. For example, if the input is the following: label1 label2 label3 label4 label5 label6 then the output should look like: label2 label5 label2 label4 label5 label6 A: You're correct - "in order to" is a very

common way of expressing "to be". Something like "in order to" suggests that there is a chain of events leading up to what you're doing. In the example you gave, there is a list of things you need to do, that are necessary to get to the end result. Your analogy of the nearest labels to each other vs. the farthest labels to each other demonstrates this, there are a number of things that happen to get you to this point. For example: label1: a label label2: another label label3: more labels label4: the goal To answer your next question about the generalization of "be able", I would say that yes, it is a common phrase, and I would use it when talking about verbs like "know", "perceive", etc
