\* \_The Photoshop CS6 online tutorials are available on the Adobe support site ([www.adobe.com/products/photoshop](http://www.adobe.com/products/photoshop)).\_ You can access a selection of the tutorials by category. For example, the three tutorials labeled Tutorials and Articles are useful for beginners. The first tutorial, Tutorials and Articles: A Quick Guide, covers the basics of how to use Photoshop. Photoshop CS6 offers a limited selection of online tools. (See the "Accessing the Internet" section, later in this chapter, for a more complete list.) ## Photoshop Features Photoshop CS6's top new features are Layer Styles (see Figure 15-1, top

image), a compact Style palette (Figure 15-1, bottom image), Type Masking (see Figure 15-2), Advanced Masks (see Figure 15-3), the Refine Edge dialog box (see Figure 15-4), and Smart Brush (see Figure 15-5).

FIGURE 15-1: The new Layer Styles feature enables you to adjust many features of a single layer simultaneously. FIGURE 15-2: The Style palette enables you to select a variety of options for text and other parts of a layer. FIGURE 15-3: Advanced Masks are essential for avoiding complications with masking when you're using Lasso. FIGURE 15-4: The Refine Edge dialog box enables you to fine-tune layers, which enables you to work efficiently. FIGURE 15-5: The Smart Brush makes it easy to remove unwanted areas from an image.

## ## Creating an Adjustment Layer

The new Adjustment layers enable you to change the color, brightness, and contrast in a layer without disturbing the underlying pixels. Most of Photoshop's layers are divided into sections called `_layers,` which enable you to view, move, and manipulate an image's pixels. Most of the time, you'll use adjustment layers to do the following:

- \* Correct any and all color and brightness issues in an image.
- \* Resize and reshape images.
- \*

Resize and reshape any image you create. \* Remove any unwanted pixels in a single or all images in a set. \* Clone an image over a portion of an existing image. \* Simplify and clarify details in an image. \* Process several layers into one image. \* Create

trafficking]. This paper analyzes the consumption of healthcare services in the context of a labor trafficking case, through the analysis of medical records taken from the patients. Case study, qualitative research, descriptive, transversal, quantitative. The study involved the collection of medical records of patients from the Public Health System (SUS) corresponding to the hospitalization unit for labor trafficking that occurred from January to December of 2011 in a specialized health care center in the capital of the state of São Paulo. The information was obtained from the medical records taken from the patients. The data were organized using Excel software and exported to the statistical software for analysis of the results. It was observed that 96.8% of patients attended the medical care in 11 months, while only 3.2% were interned for more than 11 months. The consulting time ranged from 3 to 12 months, with a mean of 6 months. It was observed that 66.7% of patients were examined in the outpatient clinic and 33.3% in the emergency care unit.
