What is the most efficient method to convert the hexadecimal number to ASCII? A: The hexadecimal notation is actually just a convenient way to convert an integer to a string representation. The ASCII you want is the same as the string "01". Convert your hexadecimal number to an integer, then convert it to a string: myNumber = 0x0100; myString = Integer.toHexString(myNumber); Then add a string "01" to the end: myString = myString + "01"; Q: How do I configure Filezilla to use the same FTP account that SSH uses?
