after an electrical failure in 1964, richard mautz became dissatisfied with the auto industry and the “business of mainstream america” and decided to participate in the counterculture of the era. the community of people around mautz and in palo alto, including larry page, whom mautz called his “best friend,” forged a new business model called “the manhattan project.” the idea was to create a simple, small, high-volume car with a focus on safety and reliability. his vision was to let teams of engineers work on each model of the car and this approach would inspire all those participating, as well as outsiders. in the late summer of 1965, mautz contacted paul terry, who was teaching in the stanford school of engineering. the two met at mautz’s apartment and terry was impressed by mautz and his vision for the new car. from that point on, mautz and terry worked together until the project's ultimate demise in early 1966, during the hiatus from the semiconductor industry association’s (sia) semiconductor equipment and materials international (semi) show. here, we would like to provide you with an overview of the company’s history, as well as a look at some of the products that were developed and manufactured by this company over the years. the concept of “dentistry in a box” was introduced at the midwinter show in san francisco in january 2013, and in early 2014, becton, dickinson & company and coltene introduced the everest evo, a point-of-care device with an integrated, rapid, digital optical bacterial identification test. i’m trying to find a way to average the rows together based on the list in the time_bins. as shown, the intervals change for the number of samples in each bin that would be averaged. i would like the output to continue to be a dataframe (or a matrix) that contains the

same number of rows, but fewer columns that have been averaged together. i have tried and failed using aggregate and rollmean, but that might be due to errors i have made. any suggestions to correctly calculate the mean of the rows using the list would be appreciated.
